FOR THE PAPER INDUSTRY

Almost 50 years of experience have taught us to handle paper with care and attention. Today, thanks to the know-how acquired, Carer is chosen by the largest international companies in the paper industry when it comes to handling paper.

Specialised for almost forty years in the design and production of electric forklifts for handling heavy and bulky loads, Carer is the recognized world leader in providing specific solutions for handling products in the paper industry.

FOR THE ENVIRONMENT, SAFETY, LOWER RUNNING COSTS

Increasingly, the most important companies in the paper sector are turning to Carer to replace forklifts driven by internal combustion engines with electric forklifts that, thanks to the elimination of polluting emissions, contribute to a significant improvement in the environment.

Carer provides high capacity electric forklifts with high visibility and very compact frame that allows to handle the increasingly heavy and bulky reels in narrow aisles (even within containers).

Carer is not just powerful: it combines power with autonomy through advanced electronic management powered by high-amperage batteries, capable of working several shifts without interruption, thanks to the quick and easy replacement of the battery. A comfortable operating position, which does not cause fatigue, offers excellent visibility for easy manoeuvring and zero stress and increases operator safety. CARER forklifts can be equipped with specific clamps for reels and spacers to position the reels at the centre of the truck.

CARER forklifts work successfully across the world from almost forty years in the main companies of the sector, being used in the production of paper and cardboard, in the processing of waste paper and in printing companies.
