ECH

S E R I E S

The new CVS ECH series deliver 10 tonne capacity all the way up to maximum lifting height, both with single or double stack spreaders. Driver productivity is boosted by our exclusive Stack Height Selector paired with the unique Drive Optimizer - all this on a machine with the best intrinsic stability in the market. In conclusion the new ECH range from CVS Ferrari is unsurpassed in its sector.

The spreader of the new CVS Ferrari ECH lift truck range is the generation of our well proven design. Now featuring a double mechanical and electric safety feature for the twist-locks and a new "all weather proof" electric system built around vibration resistant components and fitted with full LED lighting. Our unique infinitely proportional side-shift control makes sharp and precise container handling easier in any operational conditions. Single stack or double stack versions (with and without visibility window of the spreader) are available.

Both the design and layout of the system ensure unrivaled accessibility. The ECH range utilizes a high proportion of well trusted components standardized throughout the CVS Ferrari range including our landmark electronically controlled hydraulics and the oversized and pressurized hydraulic and cooling tanks.

The super-wide front axle matched to the rear axle offering the widest track in the market deliver the best lateral stability in its class.

SMARTER SAFER EASIER

The most modern and spacious driver's environment is completed by the most advanced and powerful on-board computer system ever featured by this kind of equipment. The life of users and owners of Empty Container Handling Liftrucks has never been this easy.
